OBJECTIVE

BS Information Technology student seeking a backend or web development internship — with hands-on experience shipping PHP/MySQL systems using MVC architecture, RBAC, BIR-compliant billing, and live deployment. Two production web apps live and running.

TECHNICAL SKILLS

Languages	PHP · SQL · JavaScript · VB.NET
Databases	MySQL · SQL Server
Web / UI	HTML · CSS · Bootstrap
Tools	Git · GitHub · Composer · XAMPP · Laragon
Concepts	MVC · CRUD · RBAC · Session Auth · Rate Limiting · ESC/POS · Shared Hosting Deployment

PROJECTS

SKD Point of Sale — Restaurant Management System

skd-pos.ct.ws

Stack: PHP (MVC) · MySQL · Bootstrap · Brevo SMTP · ESC/POS

- Engineered a multi-role POS (Admin / Cashier / Kitchen) handling the full order lifecycle — item variants, modifiers, kitchen dispatch, and receipt generation supporting 3+ concurrent user roles.
- Implemented BIR-compliant invoicing with OR numbering, VAT computation, and daily Z-reading reports; integrated ESC/POS thermal printing with a browser-based fallback.
- Deployed on shared hosting with a customer-facing menu page, QR WiFi modal, and admin-gated settings — holds up under concurrent multi-user sessions.

Grease Monkey — Inventory Management System

grease-monkey.ct.ws

Stack: PHP (MVC) · MySQL · Bootstrap · Brevo SMTP

github.com/shammykenan/greasemonkeyinventory

- Built a full-featured automotive-parts inventory system: SKU tracking, stock movement logs, complete audit trail, and category management with admin controls.
- Hardened with email notifications, auth rate limiting, per-action activity logging, and one-click DB backup/restore — documented in a public GitHub repo with a live demo account.

PHP E-Commerce Platform

Stack: PHP · MySQL · Bootstrap

- Implemented a product catalog with admin management, a session-based shopping cart, and an order processing pipeline covering the full frontend-to-backend data flow.
- Structured around clean separation of concerns — distinct layers for routing, business logic, and data access — reinforcing MVC principles.

ProManage — Desktop Project Management System

Stack: VB.NET · SQL Server

- Built a desktop project tracker with 3-tier RBAC (Admin / Project Manager / Member) — project creation, member assignment, task management, and progress monitoring per role.
- Designed SQL Server schema to enforce relational integrity across users, projects, and tasks; handled all CRUD operations through parameterized queries.

EDUCATION

BS Information Technology

Expected: 2027

Datamex College of Saint Adeline · Valenzuela City, Metro Manila

ADDITIONAL INFORMATION

- Shipped two live web applications with real-world functionality; maintains a public GitHub portfolio with documentation.
- Strong backend fundamentals and experience working with databases — comfortable debugging and improving real systems.
- Continuously improving frontend skills; adaptable and eager to contribute in a team environment.
